Title:

Survival of cementless total knee arthroplasty in comparison to cemented total knee arthroplasty

Authors:

C.R. Quispel, N.M.C. Mathijssen, R. de Ridder, H. Verburg, M. Rutgers, T. Duivenvoorden

Abstract:

Primarily, we aim to perform a survival analysis of patients who underwent a cementless total knee arthroplasty (TKA) in comparison to patients who underwent a cemented TKA. Secondly, we want to analyse whether there are any between-group or within-group differences between these groups. Furthermore we are interested in the frequencies of cemented TKA in the hospitals who normally perform cementless TKA.
